DOUGLAS PARK Specific Plan

This master-planned, mixed-use project on the 260-acre Boeing site adjacent to the Long Beach Airport will contain residential, commercial, retail, and industrial components, as well as public spaces. C+A developed and utilized a computerized transportation model; prepared the traffic study that evaluated 105+ intersections; planned site access and internal roadway circulation; and developed traffic mitigation plans. As part of the environmental process, C+A dealt with the Cities of Long Beach & Lakewood, and Caltrans.

Long Beach
